EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Applicant's argument that the step of constraining values for the power of the enhancement signal is different from controlling the amount of noise suppression by a parameter k in *Gustafsson et al.* is persuasive. Applicant's Specification, Page 13, Lines 6 to 26, discloses two mathematical constraints on energy as providing, firstly, that a modified vector has the same energy as an original vector, and secondly, that a difference vector has a relative low energy. Applicant's argument is correct a constraint is a bound on a variable, and that *Gustafsson et al.*'s parameter k does not constrain energy by preventing large energies from occurring, but merely scales down an energy even if the energy is small. The prior art of record does not disclose or reasonably suggest a constraint on energy for an enhancement signal. Moreover, Applicant is correct that it is not generally acknowledged in the art of noise reduction that an embedding corrupting signal is statistically related to an undistorted sound signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
